

## 8-wine shank

1) Source / host IP :- 192.168.1.56  
Destination IP :- 8.8.8.8

2) ICMP doesn't use a port  
It's is an echo reply  
protocol, not a communication  
protocol.

3) ICMP type = 8 code

The ICMP packet contains  
a checksum, an identifier  
and sequence no.

~~checksum: 0x6~~

5) ~~Host~~ Host : 192.168.1.56  
dest: 8.8.8.8

6) No, it would be 08 instead of 01.

7) No

8) The packet is ICMP type

9) These packets differ as they have ICMP type: 0 code: 0

They are different as they never reached destination they got trapped.
